

Cryptozoic

I n t e r n e t f r e e f i n a n c i a l e c o l o g y e x p l o s i o n

Cryptozoic

A revolution in old-fashioned finance

A free imagination of the future financial ecology A radical system of increasing wealth in infinite fission

We provide all developers with a shared application development environment

An open and interactive free Internet

where fully anonymous decentralized applications grow arbitrarily

A global community of tech geeks

with the potential to achieve exponential growth in wealth across application scenarios

Birth Concept

Cryptozoic think comprehensively about the future direction and value of decentralized finance based on the development history of cryptocurrency finance and blockchain technology. Salute to the Bitcoin, the great pioneer of cryptocurrency finance.

Salute to the Ethereum, the blockchain ecology pioneer.

The origin of “Cryptozoic Eon”

To simulate the geohistorical stages of the evolution of the earth's surface, which is divided into archean, proterozoic and phanerozoic. If bitcoin is compared to the archean phase, ethereum is like the ancient eon phase, and the cryptozoic project is like the earth entering the phanerozoic phase. Cryptozoic eon is a symbol, meaning that cryptocurrency finance will enter the next critical moment.

Project Planning

| | Brief | Gameplay and rewards | Start | End |
|--------------------------|--|---|---|--|
| The dark epoch | The dark epoch (genesis) | E2V (IEEX) , Fluttering plans,exploration plan,make-a-wish plans,lucky wanderers,explore leaderboard, web leaderboard, E2V trading leaderboard | The official launch of the APP is the launch of IEEX | The dark epoch automatically ends after layer E2V 200 |
| Topological epoch | Topological epoch | E2V (CEEX), V2E buyback, fluttering, exploring, Make-a-wish, lucky wanderer, explore leaderboard, web leaderboard, lucky believer, super faith, super node, E2V trading leaderboard | the launch of CEEX | Topological epoch automatically ends after layer E2V 900 (IEEX200+CEEX700) |
| The wide epoch | The wide epoch (open XXEX) | E2V (LEEX), V2E buyback, fluttering, exploring, Make-a-wish, lucky wanderer, explore leaderboard, web leaderboard, lucky believer, super faith, super node, warriors plan, XXEX, E2V trading leaderboard | the launch of LEEX | Topological epoch automatically ends after layer LEEX 1000 |
| Constant epoch | Constant epoch belongs to the stage of wealth conservation and will devote itself to the development and application of ecology. | E2V (LEEX), V2E buyback, fluttering, exploring, Make-a-wish, lucky wanderer, explore leaderboard, web leaderboard, lucky believer, super faith, super node, warriors plan, XXEX, other ecological play, E2V trading leaderboard | Starts after termination of topological epoch | No deadline |

Each era in the development process, also divided into a number of micro era. When the cryptozoic chain blocks reach a certain height, it will end the current era (or micro era) and enter the next era (or micro era).

common chain

Cryptozoic

Type: Open source blockchain application platform

Consensus mechanism: POW+MPOS+Cryper (original consensus)

Account model: UTXO+ contract account

Anonymous technology: One-time ring signature

Transaction processing: sharding

Currency: VCC (dynamic)

Block speed: 10s/ block

Each sunrise block: 8640

Peak TPS: 80,000

Key characteristic: absolute anonymity, public verifiability, high concurrency and high scalability

Cryptozoic public chain is also a completely compatible ecosystem with ethereum. All Dapps running on ethereum can run on cryptozoic. All cryptocurrencies issued on ethereum can be compatible with the cryptozoic privacy and anonymous trading environment.

The origin of "VCC"

The decentralized application ecology presented by ethereum is the inspiration source of VCC. In great respect, we have included the name of Vitalik Buterin, founder of ethereum, in the name of Cryptozoic Coin, Vitalik Cryptozoic Coin.

In fact, we are fundamentally different. The mission of VCC is not only to maintain the stable operation of application ecology, but more importantly, it will be a seed with explosive potential in the future finance.

Tribute to Vitalik Buterin, founder of ethereum

Based on the cryptozoic eon public chain creation
block release

Unlimited fission capacity and appreciation space

Issuing Mechanism of VCC

- Initial block issuance based on blockchain system
- There is no limit to the total release of VCC, which is mainly divided into two parts. Pre-mining stage and ecological mining stage.

Premining VCC

In the initial stage of cryptozoic eon, a part of the pre-dug VCC of public chain will in an open and transparent way,

be used as the initial ecological construction fund of cryptozoic eon to ensure the smooth implementation of basic ecological.

Ecological mining stage

- Gold digging period

| Block start height | Block end height | interblock gap | Block reward |
|--------------------|------------------|----------------|--------------|
| 1 | 1,280,000 | 1,280,000 | 64 |
| 1,280,001 | 3,840,000 | 2,560,000 | 32 |
| 3,840,001 | 7,680,000 | 3,840,000 | 16 |
| 7,680,001 | 12,800,000 | 5,120,000 | 8 |
| 12,800,001 | 19,200,000 | 6,400,000 | 4 |

- Deep digging period
Starting at the 19,000,001 block height,
the reward is constant at 2 VCC

network Belief

◆ Wealth preservation :

In order to promote the fission capacity of cryptozoic network, cryptozoic eon invented twin-ex mechanism, and the original twin-ex provides self-regulation of VCC value, enabling VCC to maintain its value continuously.

◆ Wealth increasing :

Cryptozoic original dandelion network makes VCC belief sufficient. As long as there is one person on earth who has not joined cryptozoic ecology, the value of VCC will continue to increase. Network size represents the volume of wealth, and the expansion of cryptozoic network volume will increase the value of individual wealth.

Value balance mechanism of TWIN-EX Series

Cryptoeon first proposed twin-ex trading mechanism, which can be divided into E2V (ETH one-way exchange VCC) and V2E(ETH buyback destruction VCC). This makes the inseparable two-way value anchoring between VCC and ethereum , and makes the future market circulation and value of VCC subject to natural market regulation

The initial VCC in the TWIN-EX is generated by pre-mine, with a total number of 327,300 and 200.

E2V

IEEX

When the cryptozoic public chain starts, it automatically opens the IEEX trading channel

CEEX

After the end of IEEX, it automatically enters the CEEX stage.

LEEX

After the end of CEEX, it automatically enters the LEEX stage.

“E2V”is completed in three stages, namely IEEX stage, CEEX stage and LEEX stage.

On entering the "E2V" phase, users can exchange ETH for VCC.

IEEX

- IEEX is divided into 4 gear positions, each gear position contains 50 resonance layers.
- Each layer resonates with 200 ETH directly into the next layer.
- ratio : the initial number is 1ETH: 1800VCC, and the resonance ratio decreases by 2 VCC layer by layer.
- Extra reward multiple refers to the number of resonant VCC in each gear position.
- The first gear is 5 times;
- the second gear 4 times;
- the third gear 3 times;
- the fourth gear is 2 times.

| | | |
|-------|-------|---------------|
| ● 200 | ----- | 1ETH=1402 VCC |
| ● 199 | ----- | 1ETH=1404 VCC |
| ● . | . | . |
| ● . | . | . |
| ● . | . | . |
| ● 5 | ----- | 1ETH=1792VCC |
| ● 4 | ----- | 1ETH=1794VCC |
| ● 3 | ----- | 1ETH=1796VCC |
| ● 2 | ----- | 1ETH=1798VCC |
| ● 1 | ----- | 1ETH=1800VCC |

- There are 700 layers. Each layer resonates with 200 ETH directly into the next layer.
- Initial resonance ratio 1ETH: 1400VCC, and the resonance ratio decreases by 2 VCC layer by layer.
- The reward multiple is 1 times.

- The total is 100 layers. Each layer resonates with 200 ETH directly into the next layer.
- Initial resonance ratio 1ETH: 1VCC, and the resonance ratio decreases by 0.01 VCC layer by layer.
- The reward multiple is 1 times.

The early you join the TWIN-EX , the higher rate you get, the more rewards you get.

In order to reward the hermit who has made great contributions in the E2V process, the cryptozoic network introduces the E2V transaction leaderboard, which will be opened in the wide epoch and Constant epoch

Statistics rule

Reaching the height of the last block of each micro era,

Count the number of each address participating in TWIN-EX from more to less, and rank the top20 in order to be included in the ranking list and participate in the calculation of rewards

TWIN-EX leaderboard

Reward objects and calculation rules

The allocated reward comes from 30% ETH of the total pool of the previous microera, and is allocated to the reward object according to the dandelion network sharing revenue model

V2E

Enter the topological epoch (when block height reaches 207360) and enable the "V2E" repurchase function. The ETH of TWIN-EX pool is used for the repurchase and destruction of VCC.

- The number of ETH per period in the V2E pool=Total number of previous block days*30%
- After opening, the settlement shall be made on schedule, and the settlement shall be fully converted according to the current number of ETH and VCC in the pool.
- The ratio of V2E is dynamically variable. According to the ratio between the total number of VCC and ETH in the destruction pool in this period, the smaller the number of VCC involved in this phase, the larger the number of ETH
- Users participating in this phase of exchange hold VCC up to the specified amount (100,000) and can use V2E

Dandelion network

Dandelion network is an original high viscosity relation network in cryptozoic eon. All individuals in the network can establish proximity relation.

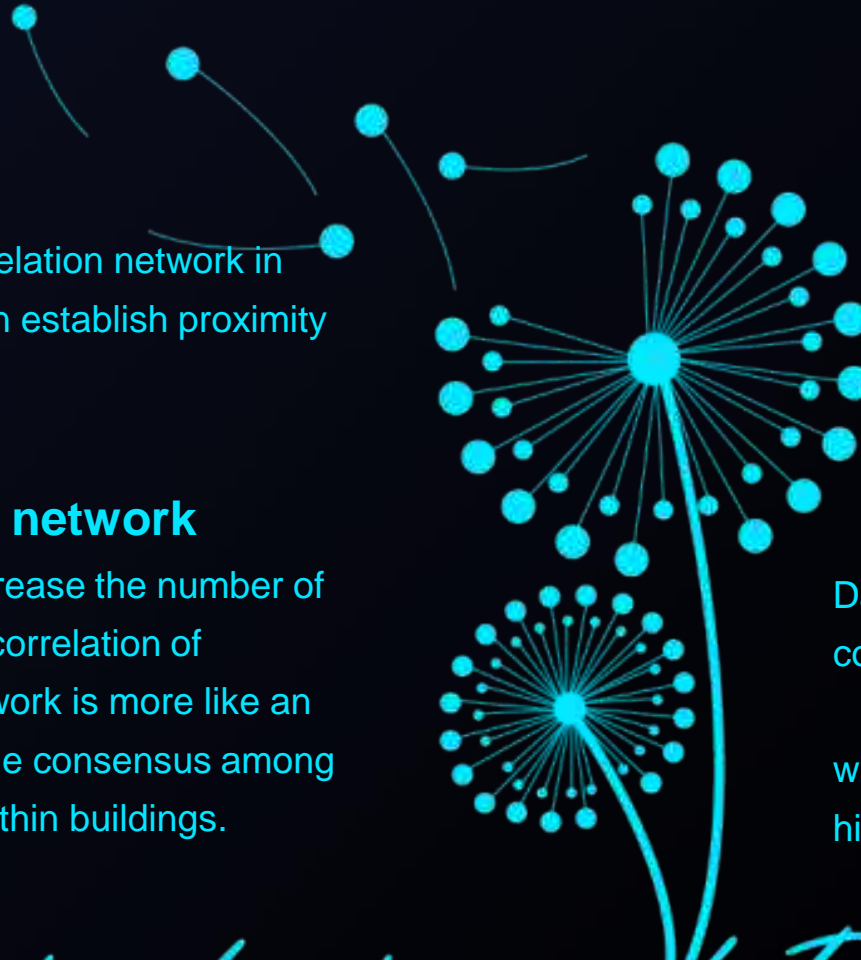

Different from hierarchical relation network

We believe that hierarchical fission can only increase the number of participants, but cannot increase the degree of correlation of participants. Without correlation, the fission network is more like an independent building, and it is difficult to unify the consensus among buildings due to the independent governance within buildings.

Dandelion network has stronger inter-individual correlation and higher consensus degree

which makes cryptozoic network stronger and higher consensus value.

Introduction of Dandelion

As shown in the figure:

→ : Pay VCC to establish proximity

123456 : the order in which proximity is established.

Take target stealer D for example

If cryptic F is activated by CAID of D

F and D are the relationship of path 1

F activates the VCC paid by CAID

D will get 60% of the network sharing revenue

B、G、E will get 25% of the revenue

A and C will get 15%

Conclusion:

the earlier you join the network, the more rewards you get.

CAID path rewards are designed to encourage CAID fission and reinforce dandelion networks by building proximity relationships. The reward comes from the VCC paid by the newly activated CAID. Specific rewards are as follows:

- The VCC of establishing proximity payment is divided into two parts, namely, the share of income (80%) and the contribution of fund (20%);
- 60% of the Shared revenue will directly reward the target recluse;
- 25% of the Shared revenue is divided equally by CAID with the recluse path of "1";
- 15% of the Shared revenue is divided equally by CAID with the recluse path of "2";

CAID activation mode

Direct activation

pay a certain amount of VCC to the activated CAID and establish an adjacent relationship with this user.

Discovery activation

through the fluttering program unique to the dandelion network, it is activated by establishing proximity relationship with CAID that captures a fluttering program enabled.

When each person enters the dandelion network, a unique identification ID, namely CAID, will be the unique and universal identity mark of cryptozoic eon. No matter it is the community ecology, the application of Dapp, or the use of exchange, their respective permissions and qualifications will be formed based on CAID authentication.

CAID is a source point in dandelion network. To be discovered or discovered, every CAID must establish at least one proximity relationship with path 1 before it can be activated. Every two CAID can establish an proximity relationship with each other, which determines the individual benefits of CAID.

CAID plans

Fluttering plans

Lockers 3600 VCC actively joined the fluttering plan to expose its CAID to dandelion network.

Exit the fluttering plan at any time, and the lockers VCC will be unlocked automatically.

Both parties enjoy the VCC incentive benefits brought by the continuous expansion of the relationship network.

Exploration plan

The exploration plan and the fluttering plan are complementary to each other. By adding the locking VCC into the exploration plan, the current CAID can find the CAID that started the fluttering plan in the dandelion network and establish a close relationship with it, so as to expand the scope of social communication system and obtain more benefits.

50VCC is required to participate in the explorer program to establish adjacent relationships.

Homeless programs

Based on the dandelion network ecology, the homeless foundation was established to award CAID prizes for outstanding and lucky in an era.

In short, it is a reward system that rewards people for ranking, randomly selecting, highlighting, etc.

Incentive network

Developers, miners, community contributors, etc., are key to the eternal survival of the cryptozoic eon.

All contribute to the development and maintenance of cryptozoic eon

VCC and ETH awards are open, transparent and fair play for everyone

Make-a-wish plan

The make-a-wish project is the primary belief in the cryptozoic network, telling all consenting hermits what you want for the future of VCC.

- Each recluse can expect the cryptozoic VCC
- Fill in and submit to the wishing fountain
- After wishing, VCC will be received from the wishing fountain in return
- The VCC source in the pool is 5% of the total daily mined COINS
- Divide it equally among the hermits who take part in the vow
- Each hermit receives a maximum VCC of 10
- Every new recluse who joins the dandelion network
- Only five free wishes
- You can lock 1000 VCC
- Enjoy unlimited wishing
- You can always quit the make-a-wish program
- The 1000 VCC locks will be unlocked automatically

Lucky believers

The cryptozoic network will draw a certain number of lucky believers

Give a specified number of ETH in return

Believer qualification

Participated in 9900 VCC lockers

You can always opt out of the Lucky believers

The VCC of the lock will be unlocked automatically

The winning rules for lucky believers

from the believers who meet the requirements, each resonance 50ETH shall produce one winning number with no limitation.

Rewards for lucky believers

30% of the ETH for the micro age resonance pool

Reward allocation

the total reward quantity of target recluse is 60%, on average, the path is 25% for 1 recluse, the path is 15% for 2 recluse.

Super believer

Super believers are deep believers in cryptozoic networks

Super believer qualification

Locks 48,000 VCC

You can always opt out of the faith program
The VCC of the lock will be unlocked automatically

The winning rules for Super believer

In the height interval of block 1-128,000
The maximum number of super-believers is
400

Rewards

The cryptozoic network distributes 20 percent of the
ETH in twin-ex pools equally to all super-believers

Reward allocation

The total number of awards awarded to the
believers (target recluse) is 60% (on average 25
for 1 recluse and 15% for 2 recluse)

The super node

In order to increase the number of nodes in the network and ensure the stability of the network.

Cryptozolic networks need more belief nodes to join and set up super nodes

Node qualification

Lock up 126000 VCC

And build real physical network nodes

You can exit the supernode at any time

The VCC of the lock will be unlocked automatically

Rewards

Cryptozolic networks will mine for 20% of net. COINS

Distribute equally to all super nodes

The winning rules for Super node

In the height interval of block 1-128,000

The maximum number of super-believers is 400

Reward allocation

The total number of awards awarded to the believers (target recluse) is 60% (on average, 25% for 1 recluse and 15% for 2 recluse)

ecologically applied

Cryptoeon is a free financial network with unlimited fissionability beyond bitcoin, eitron and VDS.

It allows developers to introduce innovative technologies and models to develop killer applications, and meanwhile supports magnitude transaction processing and financial business.

It is an ecologically decentralized underlying system based on financial ideas

Cryptozoic Authenticator

Cryptozoic will create an anonymous authentication system called cryptozoic authenticator, which is a two-step authentication software token based on a one-time cryptographic algorithm based on time and hash. It can be used for anonymous authentication service of any other software system.

The usage mode is the same as Google authentication, but the difference is that cryptozoic authentication is purely anonymous, which USES the private key of users in cryptozoic public chain as the basic cryptographic algorithm.

XXEX -Anonymous exchange

Complete decentralization

This is a decentralized exchange, where assets are directly tied up and algorithms are matched, and no third-party fund precipitation is involved.

KYC authentication is not required

Exchanges do not adopt traditional KYC authentication, but import users through CAID authentication. Cryptozole network is the exchange network.

Trade completely anonymously

Hide user IP address, hide transaction address, encrypt transaction data, only user authorized to view. Fully anonymous transactions, all transactions and currency exchanges are implemented to ensure that transaction addresses and personal information are not tracked.

T+0 real-time settlement

The transaction is settled, and there is no need to transfer multiple accounts. It supports merchants' legal tender transactions and earns cash at the rate at any time.

Anonymous financial ecology

Wealth-multiplying systems

The closed-loop VCC value-added model multiplies the wealth of participants.

Quantitative financial transactions

Digital card quantification principle, help users financial investment.

Digital freedom

Decentralized environment gives free trade, free interaction.

More anonymous

Fission financial ecology

1

Cryptozoic resonance modes and dandelion networks create a sustainable fission environment on which any fission financial application can be made.

Developer ecology

2

Cryptozoic eon is a completely open environment that encourages developers around the world to participate in further innovation and improvement. We provide a wide range of compatible API interfaces and simple SDK toolkit.

Privacy anonymous ecology

3

Cryptozoic eon provides an absolutely anonymous environment for global participants. Anyone containing personal privacy, trade secrets or non-disclosure can be granted cryptozoic to conduct transactions.

Distributed application ecology

4

Dapp is the future development trend. Cryptozoic eon is not only a huge financial system, but also a stable and reliable Dapp operating system. We encourage application developers to use our system to run.

Digital information management ecology

5

Cryptozoic eon will be developed for multi-chain and multi-currency in the future, absorbing global digital assets to form a complex digital information and management network.

Super Goal

- Start three
- Go beyond second
- Aim first
- Cryptozoic consensus VCC
- Wealth goal 100 times ETH

The cryptozoic eon is a tribute to its predecessors, but it's also a reminder of the past, and we can look further into the future

Let the blockchain return to its essence
Reshape the future financial era

co-construction and sharing
